PANADENT
THE NEXT GENERATION

THOMAS ENDODONTICS

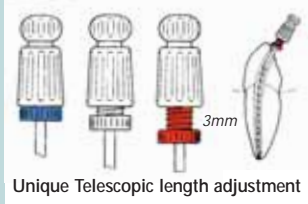

THOMAS Hand and engine instruments

An immensely popular, comprehensive range of quality stainless steel hand and engine instruments of international standard.

The range incorporates the unique non-slipping telescopic stop adjustment with ergonomic chunky handles facilitating effortless use.

Six instruments per pack including H and K files, Reamers, Canal Finders,

Unique Telescopic length adjustment

Superflex Files, Paste Fillers and the popular Dynamic range for reciprocating handpieces.

NEW

Halve your working time with the NEW NiTi files - see opposite

THOMAS NiTi Helixofile

Flex with us and halve your working time!

The new Thomas Helixofile is an innovatively designed, double edged helix shaped file made from nickel titanium. Double 90° flutes means twice the cutting efficiency of traditional instruments, with the added benefit of being able to both file and ream with a single instrument for the entire treatment process.

Being manufactured from nickel titanium means that flexibility is dramatically increased minimising fracture risks. Cleverly designed flutes also improve transport of debris and a 90° tip ensures a secure apical seal is fashioned.

New Helixofiles are available in sizes 15 to 80, length 25 and in assorted packs 15/40 and 45/80. They may be used both manually and with a handpiece.

THOMAS Storage

Mini endodontic caddy

The Thomas mini endodontic caddy carries up to 24 instruments and includes a handy metric measure. It also features resting/cleaning pod area with a gauze wipe.

D7 box

The eternally popular D7 box is now available in original Cream, Red and new Aqua colours. Constructed from plastic it provides a handy dispenser for all manner of endo instruments and burs alike, to be used in conjunction with Rusnon.

ANTI-RUST

Rusnon anti-corrosion cleaning

DOES EXACTLY WHAT IT SAYS ON THE BOTTLE - STOPS RUST!

"PRE-STERILISATION CLEANING. This is probably the most important step in the decontamination process..."

BDA - Infection Control in Dentistry. Workshop Four Decontamination & Disinfection. Dr M. Fulford, BDS, DGD, FIBMS

A long-standing firm favourite in many practices, Rusnon has stood the test of time both in terms of efficacy and popularity.

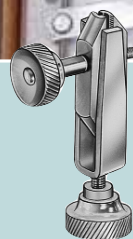

Its solution is tripartite; sanitising (contains chlorhexidine), anti-corrosive to protect from rust all endodontic/rotary instruments placed in it and last but not least, non-ionic tensides help pull debris away from the most inaccessible cutting flutes or blades.

Rusnon may be used neat or diluted. 1.2 litres makes double the quantity whilst maintaining efficacy.

THOMAS Post removal

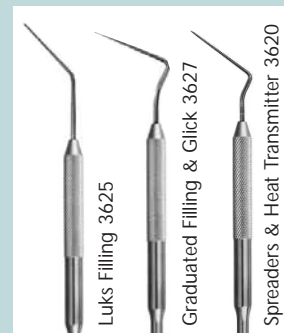

The Gonon Professional kit is perfect for passive fit posts and includes all necessary items for headache-free post removal.

For screw posts, a competitively priced smaller Thomas Screw Post Removing kit is available, alongside the handy Post Puller from Sword which is of use when the post and root surface angles are at right angles.

ORAL, ENDO AND IMPLANT SURGERY

Sword hand instruments

For many years Sword in Germany have produced stainless steel instruments of outstanding quality and innovation.

Recent developments include the Micro needle holder with tungsten carbide inserts, ideal for suturing/instrument fragment retrieval.

X-RAY ANALYSIS

X-Ray analysis and stain remover

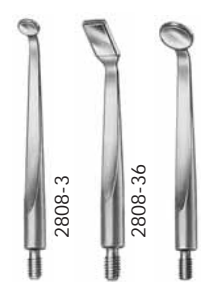

The Panadent RXD and RXF solutions provide 30 second quality permanent film images, which are especially useful for endodontic or similar 'fast' picture areas where immediate chairside diagnosis is required.

The non-glutaraldehyde solutions are highly concentrated allowing up to 500 films to be developed from just one 1 litre bottle of developer and fixer.

Also the handy 'PANA' Chemical Stain Remover (not shown) is a useful adjunct for cleaning splash stains from both laundered and unlaundered clothing and for cleaning equipment.

Micro mirrors - Rhodium plated

Micro needle holder

Crown removers

Morrell bridge remover

4925

GP & PP

Gutta Percha and Absorbent Paper Points

Hand rolled using the finest grade raw materials and uncalendered paper stock for optimum performance. All are ISO colour-coded for ease of selection in a wide range of sizes.

NEW - now available in sizes 04 and 06 taper.

APEX LOCATORS

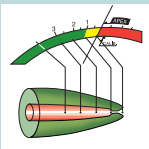

Justy II Apex locator

“I have been using the Justy II for some months now and have found it extremely reliable in indicating the working length”, reports Dr Ivor Newman of Devonshire Place, London W1.

“Justy II is a reliable instrument for routine endodontic procedures”. Ms Vida Adib. BSc MCLinDent MFDS RCS(Eng) MRD RCS(Ed). Specialist in Endodontics at Eastman Dental Hospital.

Apex locators have been around for some years now but the newer types, of which Justy II is a prime example, provide the most consistently accurate and exact measurements possible, regardless of blood or medical fluids in the root canal.

The fully automatic Justy II has no on/off switch. When measuring is initiated, Justy II turns on automatically and turns off automatically 150 seconds after you have finished.

Adjusting the meter before each patient and periodic adjustments are no longer necessary, which means root canal verification can start immediately. An accurate, steadied reading is assured, as the unit contains a stabiliser for the meter needle. For reassurance that readings are undistorted and accurate, a one-touch ‘Check’ button is provided.

Justy II is also equipped with an exclusive cord reel, enabling neat storage of the long probe cord. All cords are autoclavable and Justy II comes complete with instructional video and spare mouth clips/instrument holder. The unit is also impressively compact and lightweight.
